PROFESSIONAL SUMMARY

Final-year Computer Science student specializing in web application development and aspiring to become a Junior Full-Stack Developer. Experienced in developing web applications using React, JavaScript, Node.js, Express.js, Sequelize, and PostgreSQL. Contributed to an AI Interview Coach platform that integrates artificial intelligence to help users practice job interviews, as well as an English learning application featuring AI-generated comics. Familiar with user interface development, REST API implementation, relational database management, and AI service integration. Eager to contribute to building functional, well-structured, and user-focused web applications.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, Java, C++

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Vite

Backend & Database: Node.js, Express.js, REST APIs, Sequelize ORM, PostgreSQL

Tools & Workflow: Git, GitHub, Postman, Supabase, PM2, API Testing, Debugging

AI Integration: Groq API, Whisper Speech-to-Text, ElevenLabs Text-to-Speech, Generative AI Integration, Prompt Engineering

Other Technical Skills: API Integration, Full-Stack Web Development, Relational Database Management, Technical Documentation, Application Testing and Debugging

Languages: Indonesian (Native), English

EDUCATION

Hacktiv8

Full-Stack Web Development Bootcamp | June – October 2026

- Studied web application development using React.js, Node.js, Express.js, and PostgreSQL.
- Developed web application projects involving REST API integration, database management, and frontend and backend feature implementation.

Universitas Mercu Buana

Bachelor's Degree in Informatics Engineering | 2022 – 2026

GPA: 3.63/4.00

- Studied software development fundamentals, programming, and database management.
- Developed a final-year thesis project focused on an English learning application featuring comics generated using Generative AI.

ERP Consultant Intern

PT. Kreatif Dinamika Integrasi | South Jakarta, Indonesia | September – December 2024

- Studied the use of Microsoft Dynamics 365 as an Enterprise Resource Planning (ERP) solution to support business processes.
- Gained an understanding of ERP workflows and their implementation in supporting business operations.
- Participated in team activities related to the use of Microsoft Dynamics 365 throughout the internship.
- Developed an understanding of how information technology supports enterprise systems and business processes.

PROJECT PORTFOLIO

1. Intervue — AI Interview Coach

Role: Frontend Developer & AI API Integration | Hacktiv8 Team Project | October 2026

Description: An AI-powered interview practice platform designed for fresh graduates and junior professionals to prepare for job interviews based on their profiles and job descriptions. The application provides interview simulations and answer evaluations to help users assess their readiness and identify areas for improvement.

Key Features:

- Integrated user profiles and job descriptions into an AI-powered interview preparation workflow.
- Supported text-based and voice-based interview sessions, including transcript review and editing.
- Integrated AI-powered answer evaluation and follow-up questions.
- Provided readiness dashboards, interview reports, and interview history.

Tech Stack: React.js, Vite, JavaScript, Node.js, Express.js, Sequelize ORM, PostgreSQL, Groq API, Whisper Speech-to-Text, ElevenLabs Text-to-Speech.

- **Live Demo:** https://interviu-client.issac.biz.id/

2. Toko Nusantara — Indonesian Local Products Marketplace

Role: Full-Stack Developer | Hacktiv8 Phase 1 Pair Project | August 2026

Description: A marketplace application designed to help Indonesian artisans and small businesses offer local products to customers. The application provides a product catalog and separate workflows for sellers and buyers.

Key Features:

- Developed user registration, login, logout, and session management workflows.
- Implemented product catalogs, product detail pages, and filtering by category and price.
- Enabled sellers to create, update, delete, and upload images for product listings.
- Developed a shopping cart with functionality to add products, update quantities, and remove items.
- Implemented role-based access control for sellers and buyers, along with budget management in user profiles.

Tech Stack: JavaScript, Node.js, Express.js, EJS, PostgreSQL, Sequelize ORM, bcryptjs, express-session, Multer, Git, GitHub.

Project Links:

Role: Web Developer | Hacktiv8 Phase 0 Team Hackathon Project | July 2026

Description: A web application that displays information about 30 Indonesian badminton players based on national rankings. Player information is organized into men's singles and women's singles categories to help users explore individual profiles.

Key Features:

- Retrieved player data from a JSON file and dynamically rendered it on web pages.
- Organized 30 players into men's singles and women's singles categories, with 15 players in each category.
- Displayed player cards containing names, national rankings, clubs, statuses, categories, and photos.
- Implemented player search and modal windows for detailed player profiles.
- Handled failed image loading by displaying player initials as fallback content.

Tech Stack: HTML5, CSS3, JavaScript, JSON, Fetch API, Git, GitHub.

4. Comic English — AI-Generated Comic Learning Application

Role: Full-Stack Developer | Individual Project (Final-Year Thesis) | 2025

Description: An English learning application that uses comics generated with Generative AI to support interactive learning. The application provides separate roles for teachers and students to support the learning process.

Key Features:

- Developed a web-based learning interface using React.js.
- Implemented application workflows for teacher and student roles.
- Integrated AI-generated comics to support English language learning materials.
- Supported student learning progress tracking and learning result recording.
- Connected the frontend application with backend services and data storage.

Tech Stack: React.js, Vite, SQLite, Generative AI, ComfyUI, Stable Diffusion XL (SDXL), IP-Adapter.

Project Links:

5. Smart Hammer — AI-Powered Auction Platform

Role: Frontend Developer | Team Project | October 2026

Description: A web-based auction platform that integrates real-time bidding and Generative AI to provide an interactive, informative, and responsive auction experience for buyers and sellers.

Key Features:

- Developed the auction interface using React.js, Vite, and Tailwind CSS.
- Built pages and reusable components for auction listings, product details, bid prices, and auction status information.
- Integrated real-time bidding using Socket.IO Client to display bid updates instantly.
- Implemented application state management using Redux Toolkit and React Context API.
- Connected the frontend to backend REST APIs for user authentication and auction workflows.
- Integrated AI Product Q&A to help users obtain information about auction items.
- Integrated an AI Auctioneer feature to enhance user interaction during auctions.
- Developed auction countdowns and winner information displays based on backend data.
- Implemented page navigation using React Router.

Tech Stack: React.js, Vite, Tailwind CSS, Redux Toolkit, React Context API, Axios, Socket.IO Client, React Router, Generative AI.

6. Homestay Pulau 1000 — Homestay Booking Application

Role: Backend Developer | Team Project | September 2026

Description: A web-based homestay booking application designed to help users explore accommodation information and make reservations, while providing administrative features for managing homestay data.

Key Features:

- Developed backend services using Node.js and Express.js to handle application business logic.
- Implemented user authentication and login session management.
- Developed user registration with password hashing using bcryptjs.
- Managed homestay data, including listings, accommodation details, and booking workflows.
- Implemented administrative functionality for managing homestay information.
- Managed amenities data and relationships between homestays and amenities using Sequelize ORM.
- Managed database schemas and migrations to maintain a consistent data structure.
- Integrated PostgreSQL for data storage and EJS for server-rendered web pages.

Tech Stack: Node.js, Express.js, Sequelize ORM, PostgreSQL, EJS, bcryptjs, Nodemon.
